Raidel Martínez Santos

Backend Software Engineer · Applied AI

Curitiba, Brazil · Remote · yoshilol0526@gmail.com · github.com/YoshiLoL0526 · linkedin.com/in/raidel-martinez-santos

SUMMARY

Backend software engineer with 4+ years of experience building and running production products with **Python (FastAPI)** and **TypeScript (Next.js, NestJS)**. Focused on applied AI —RAG platforms, LLM agents and n8n automation— for healthcare SaaS, document management and support tooling. I own the full cycle: API and data design, Docker deployments, observability and incident response.

PROFESSIONAL EXPERIENCE

Software Engineer · InvokeIA — **Nov 2025 — Present**

Clinical management & AI automation SaaS — *Remote*

- Build and maintain a platform clinics use every day: scheduling, clinical records, invoicing, patient messaging over the **WhatsApp Business API**, AI agents and a **DICOM** viewer.
- Diagnose and fix production incidents quickly, keeping isolated failures from turning into service outages for clinics.
- Optimize critical flows in the **Python / FastAPI** event server and **n8n** workflows to improve response times.
- Run critical deployments and maintenance with **Docker**, coordinating changes so client operations are never interrupted.

Tech: Python, FastAPI, n8n, Next.js, React, PostgreSQL, Docker

Software Engineer · Synapse Innovation Lab, SL — **Oct 2024 — Nov 2025**

Product & AI consultancy — *Remote*

- Built the backend and AI integration of several client **RAG** platforms: Synopsia (document and audio management with semantic search and mind maps), AiFink and AJU/AjuntaTech.
- Built **AIssue Detector**: a **FastAPI** microservice that classifies incident reports by category, severity and team with **GPT-4.1**, with a React chat UI, image attachments and API-key protection.
- Reworked services to handle concurrent users, removing bottlenecks around shared resources and keeping response times stable.
- Added metrics, logs and alerts to catch failures and degradation in production before they reached clients.

Tech: Python, FastAPI, Flask, PostgreSQL, OpenAI, RAG, React, Docker

Software Developer · Desoft — **Sep 2024 — Jan 2025**

National software company — *Santiago de Cuba, Cuba*

- Developed **Odoo 17** modules and APIs to automate business processes for enterprise clients.
- Designed relational and NoSQL data models, database schemas and internal tooling in an agile team.

Tech: Python, Odoo 17, PostgreSQL

Software Engineer · Freelance — **Aug 2022 — Present**

Custom software for clients, alongside my full-time roles — *Remote*

- **TopSite AI:** backend for an AI website-builder — plan- and resource-based permissions, AI page generation and editing with version history and rollback, and Sentry monitoring.
- **Paris System:** management system that replaced spreadsheets for a formalwear-rental store — inventory, contracts, payments and reports with RBAC and audit trail, shipped as a single Windows executable.
- Build chatbots, RAG and information-extraction solutions, plus full-stack apps deployed with Docker and covered by automated tests.

Tech: Python, FastAPI, SQLAlchemy, PostgreSQL, OpenAI, React, Docker

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL
Backend	FastAPI, Flask, NestJS, Fastify, SQLAlchemy, Prisma, REST, WebSocket, JWT / RBAC
AI	RAG, LLM agents, OpenAI, Anthropic, Ollama, MCP, ChromaDB, vector search, n8n
Frontend	React, Next.js, React Native, Tailwind CSS

Data & infrastructure	PostgreSQL, Redis, SQLite, Docker, Nginx, GitHub Actions, Linux
Quality & workflow	pytest, Vitest, Playwright, AI-assisted development with Claude Code and Codex

PERSONAL PROJECTS

- **Vaelgrim** `vaelgrim.com` — Live multiplayer RPG with an authoritative **Fastify + WebSocket** server, deterministic 20 Hz simulation, load-testing bots and Docker deployment.
- **Aurora** `github.com/YoshiLoL0526/aurora` — Desktop UI library for Python with a native **Rust** core (Skia + Taffy); powers Rec Studio, a screen recorder and editor.
- **Agent SDK** — Async Python SDK for LLM agents: swappable providers (Anthropic / OpenAI / Ollama), vector memory, ReAct mode and multi-agent orchestration.
- **MCP Toolkit · Mnemosyne** `github.com/YoshiLoL0526/mcp-toolkit` — **MCP** servers that give AI agents web search, a code sandbox and persistent semantic memory backed by ChromaDB.

EDUCATION

B.Sc. in Computer Engineering **2021 — 2024**

Universidad de Oriente · Santiago de Cuba

Thesis: detecting heat loss in industrial boilers from thermal images.
